

Torchbox  INNOVATION 

# Part 1: An introduction to AI

Understanding the foundations of Artificial Intelligence.

01

An introduction to  
AI for Nonprofits

# What is this?

Artificial Intelligence (AI) can be complex and a little overwhelming to get to grips with.

This resource is designed to provide Nonprofit organisations with the foundational information on what Artificial Intelligence is, why it's important and the impact it is having on our social, ecological and economic systems.

It's not exhaustive, it's a primer. We're on hand to answer any questions you have or if you would like to delve deeper into any of the areas covered.

# Artificial Intelligence

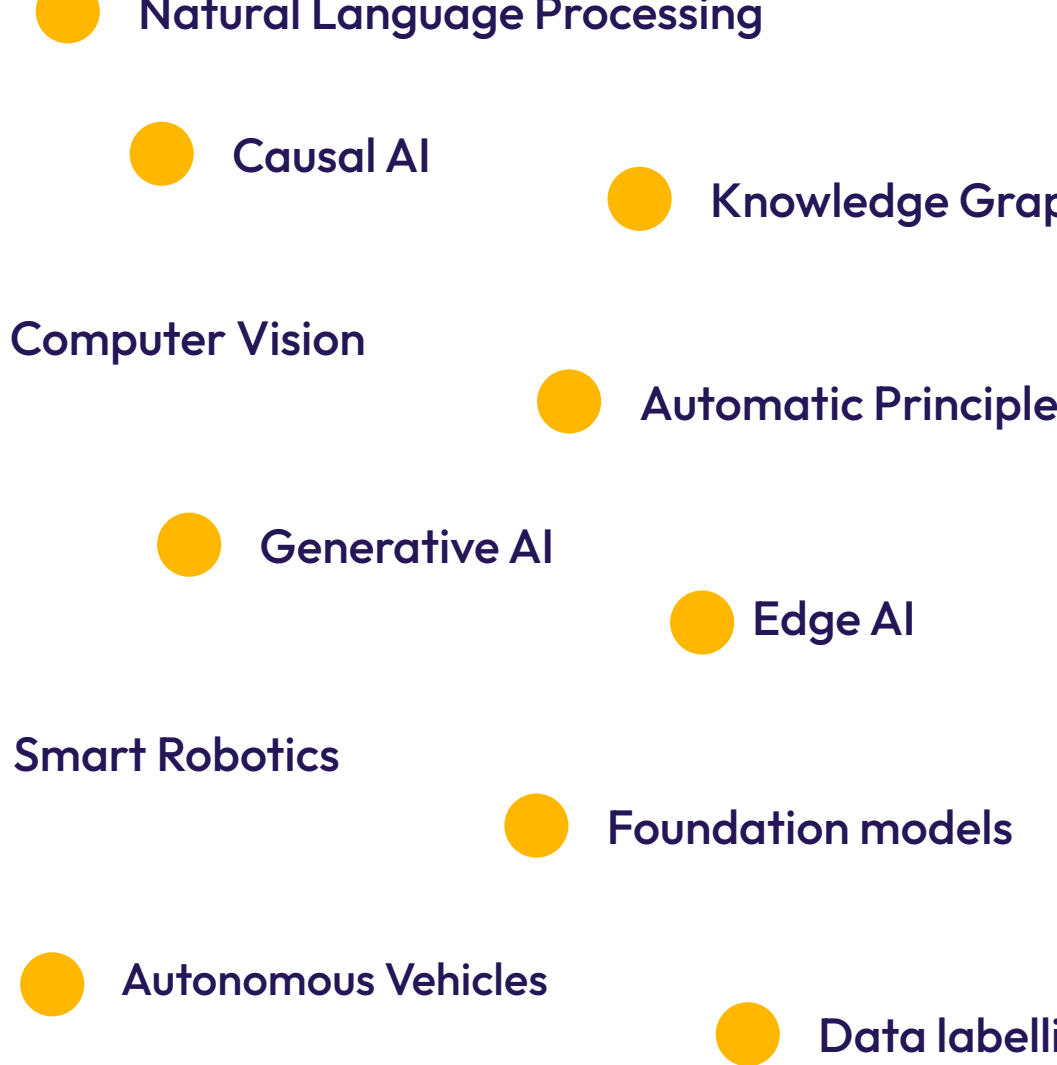

BARD AI

What is Artificial Intelligence?

**No widely accepted, universal definition.**

**It's a tapestry  
of different  
technologies.**

**Resulting in  
machines  
that can...**

**Learn & adapt**

**Understand language**

**Speak, hear & see**

**Plan & schedule**

**Automate tasks**

**Emulate deep expertise**

## Torchbox define AI as...

a discipline, like history or physics, that focuses on creating machines which can do tasks that typically require human intelligence.

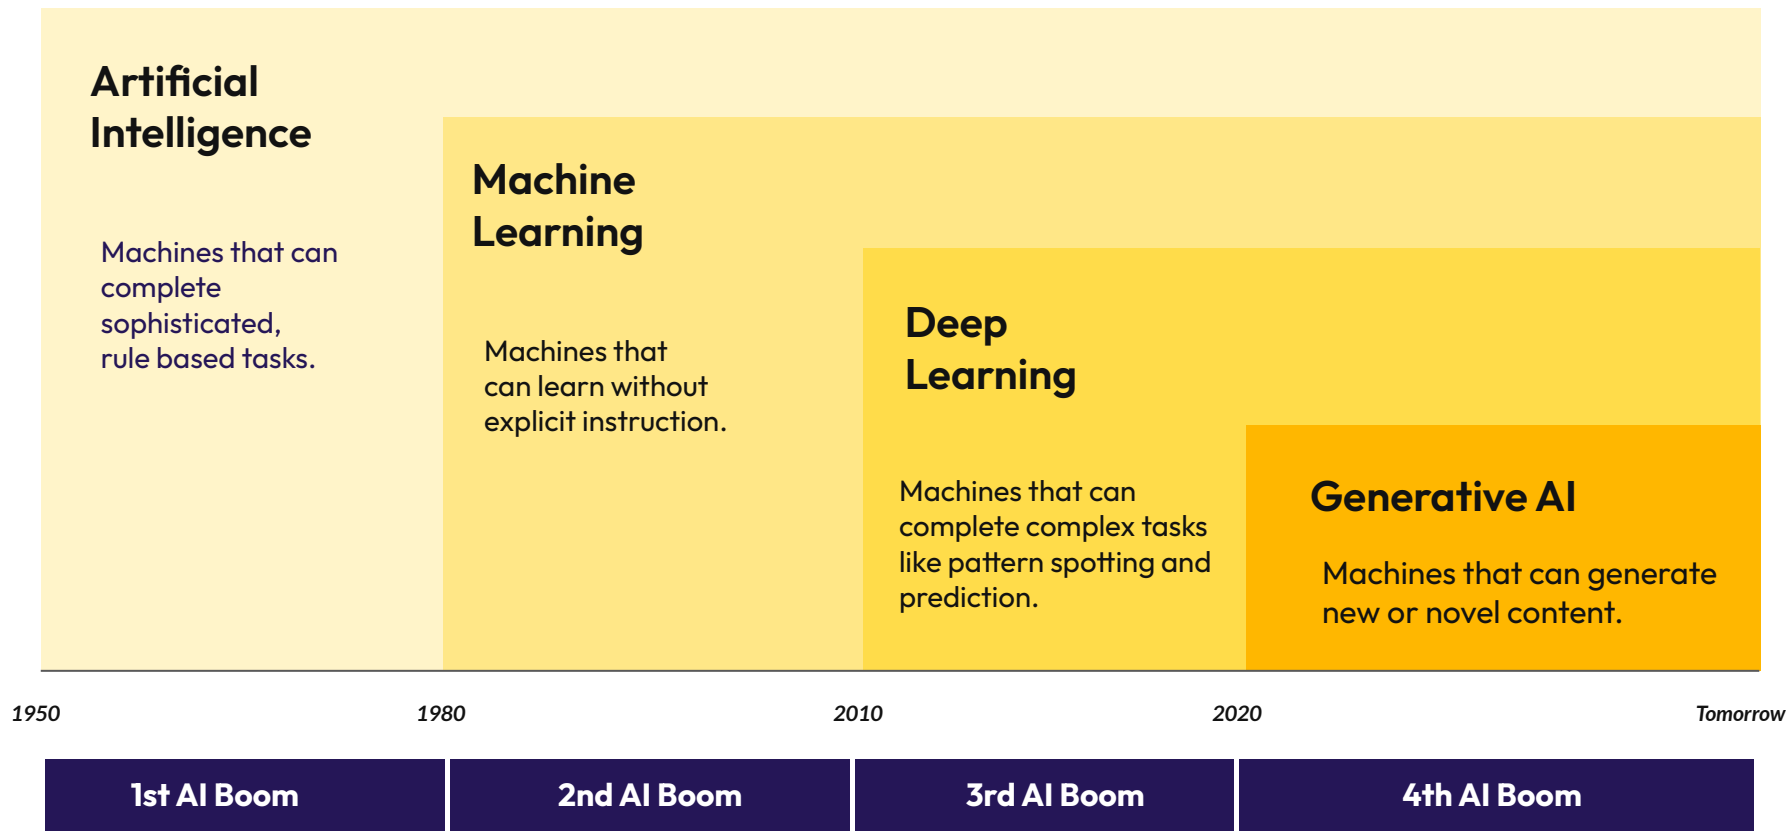

# Tasks like...

- Problem solving
- Decision making
- Content creation
- Prediction, analysis & synthesis
- Translation & communication
- Learning & adapting
- Material or Drug design & discovery
- Many, many more!

# There have been 4 big “booms” to date ...

There are two different AI categories.

**AI can be categorised into two main  
decision making approaches...**

# **Traditional AI**

## **Deterministic**

Set of rules that are defined & the outcome is based on those rules.

---

**“If this, then that.”**

# **Generative AI**

## **Probabilistic**

Decision are made based on probabilities or likelihoods.

---

**“The outcome can vary, even if the input is the same.”**

# Traditional AI

## Deterministic

**These models are best when the outcome must be the same, everytime.**

---

Better for tasks with clear cut rules like calculating the square root of a number or stopping a train at a red light.

# Generative AI

## Probabilistic

**They are better at navigating complex situations or when there is a need to account for uncertainty.**

---

Better suited for tasks like Natural language processing, image recognition or analysing and spotting patterns.

**Many of these  
models are  
“Black boxes”...**

**In AI, a "black box" refers to a system or model whose inner workings are not visible or easily understood. Even by the experts who built them.**

**Meaning inputs and outputs are observable but not how the input is transformed into the output.**

# Examples of advancements over the past 12 months...

 runway

  
Gemini

Google

  
Torchbox

# And many others...

# With leading organisations investing heavily in the space...

amazon

Microsoft

Alphabet

ANTHROPIC

OpenAI

Google DeepMind

NVIDIA

Across both software and hardware

Torchbox

There are many models and tools depending on the application...

Perplexity

Meta AI

Hugging Face

Jasper

Gemini

runway

BLOOM

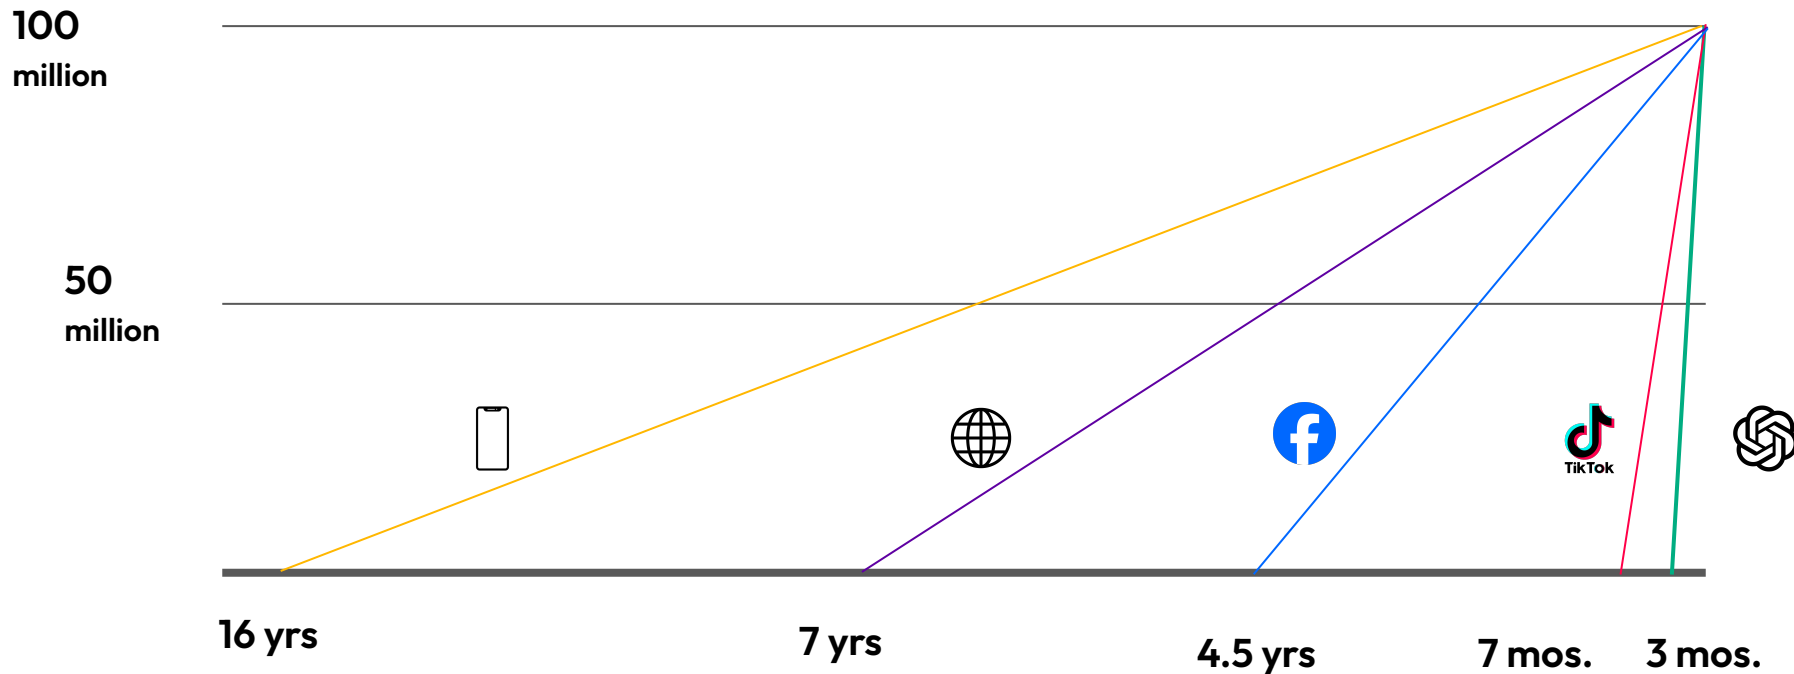

BARD AI

# Generative AI growth curve was the fastest, ever.

ChatGPT took just 3 months to get to 100m users.

Mustafa  
Suleyman

“

**“In 1996, thirty-six million people used the internet; this year it will be well over five billion. That's the kind of trajectory we should expect for AI, only much faster.”**

**Mustafa Suleyman, Deep-Mind co-founder**

# Mustafa Suleyman talks about 3 waves of AI...

## Wave 1

### Classification

We have proved we can train machines to classify various types of input data.

## Wave 2

### Generation

We proved machines can take that data and produce new or novel content.

## Wave 3

### Interaction

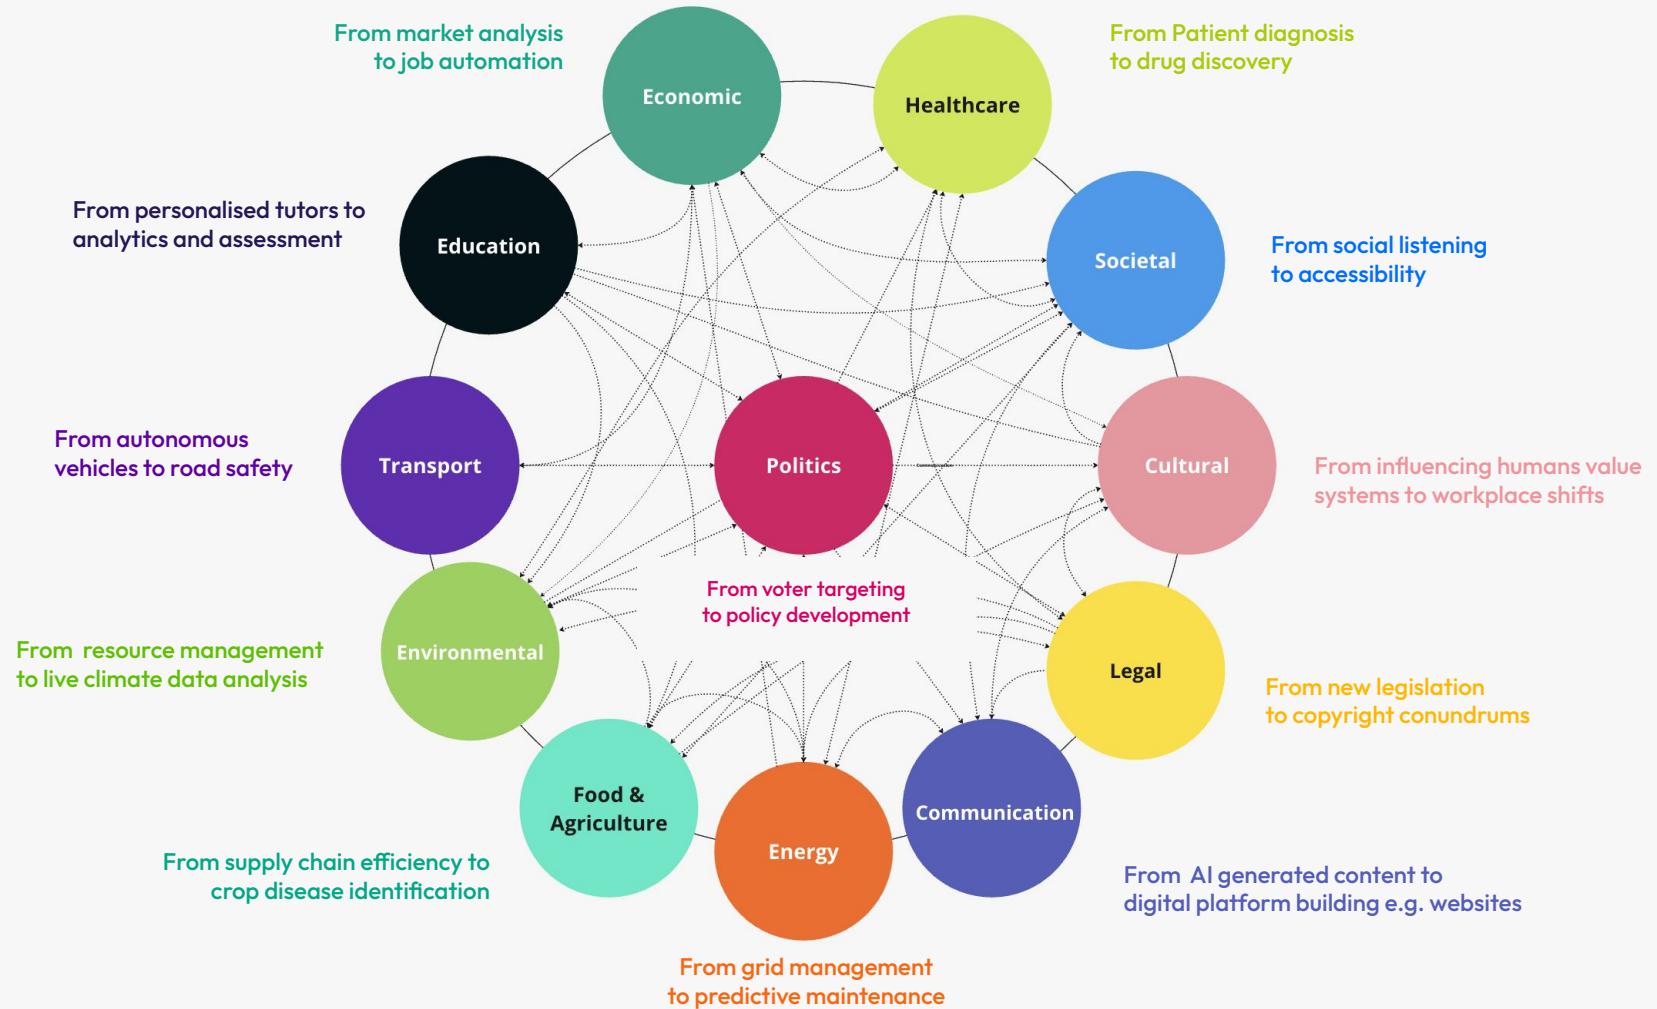

The wave we are entering now, is the future interface of AI.

What is the best interface and interaction with AI systems?

The impact and applications are far reaching.

**AI is already impacting every societal system.**

# There are risks\* that need to be carefully considered.

\*Some of the risks from AI systems

\*\* High uncertainty

Growing consensus on the profound impacts

**AI is increasingly being described  
and acknowledged as Technology  
that will transform our economy,  
environment and society.**

Joy  
Buolamwini

Fei-Fei Li

Klaus  
Schwab

Timnit  
Gebru

António  
Guterres

Some are going as far as describing AI as the next

**General purpose technology (GPT).**

Mo Gawdat,  
Former Google X

Bill Gates,  
Former Microsoft CEO

Mira Murati,  
OpenAI CTO

Sundar Pichai,  
Google CEO

**The GPT Definition varies.**  
**The characteristics remain the same.**

**A Single  
recognisable  
technology**

**Pervasive  
Becomes widely  
used**

**Improves  
Compounding  
over time**

**Effects  
Creates spillover  
effects**

**The GPT Definition varies.**  
**The characteristics remain the same.**

**A Single  
recognisable  
technology**

**Pervasive  
Becomes widely  
used**

**Improves  
Compounding  
over time**

**Effects  
Creates spillover  
effects**

**Whether a GPT or not.**

**It is an important driver of change.**

“

**In my lifetime, I've seen two demonstrations of technology that struck me as revolutionary... the GUI and ChatGPT.**

**Bill Gates, March 2023**

**Equip and empower  
your teams with the  
foundational  
knowledge to leverage  
AI for impact.**

## **AI foundations session**

In this 1-hour session, we'll share:

- An introduction to AI
- How AI is impacting the sector
- Exciting examples of AI for Good
- How to get started

And we'll answer any questions your team has.

**[Book an AI foundation session](#)** ►

**Please get in touch with us  
if you have any questions.**
